

SANMINA-SCI

Cables

San Jose, California

High-quality manufacturing for time-sensitive projects.

Responsive and flexible manufacturing of cables and small boxbuilds.

If high quality and time sensitivity are driving your next project, Sanmina-SCI's San Jose cables facility has the expertise and coordination to deliver the manufacturing support you need. Be it product design and development, NPI or full production, our San Jose facility manages your supply chain to ensure that materials are available at competitive costs and that tooling is ready when you need it. Plus, the facility offers the latest in cable technologies – such as mechanical cable preparation and termination by application crimps – to support flexible manufacturing models and create the ideal environment for your special needs.

Manufacturing Services

- High-speed I/O cable links
- Custom circuit solutions
- Small boxbuild
- Adaptors and terminators
- Coax products: SMA, SMB, SMZ, MMCX, BNC
- Micro-coax assembly using discrete and bundled cables in crimp and fine-line solder versions

Engineering Services

- NPI, design and application engineering
- Process development
- Project, process and ECO management
- Laboratory testing

Testing Services

- Attenuation, impedance and eye pattern
- FEXT and NEXT
- VSWR, bit error rate
- Time delay and skew

Technologies

- Handling of multiple cable types
- IDC and fine-line solder
- Interlocking and electrical tests

Logistics Services

- EDI
- Kitting
- Materials management
- RMA
- Product life spares support

Certifications

- ISO 9001:2000
- ISO 14001
- TL 9000
